Issued by M Cormican (MCRN 011105) National Lead HCAI & AMR (10/08/18)

**Antimicrobial Resistance
and Infection Control Team**

Introduction

Healthcare associated infections (HCAI) and antimicrobial resistance are key patient safety issues for the Health Service Executive. In relation to HCAs a number of Key Performance Indicators (KPIs) have been developed. In addition, the Health Protection Surveillance Centre (HPSC) collects surveillance information on key pathogens and report regularly on trends.

Surveillance systems are in place in acute hospitals to facilitate the collection and management of KPIs. Work is planned to address surveillance systems for non-acute settings and thus a system for monitoring KPIs in these settings.

In 2017, three KPIs were identified for inclusion in National Service Plan and additional KPIs were identified for scoping/ testing with the intention of adding to the suite in 2018.

KPIs on HCAI in 2017 National Service Plan

<i>Health Care Associated Infections (HCAI)</i>	<i>Target</i>
% compliance of hospital staff with the World Health Organisation's (WHO) 5 moments of hand hygiene using the national hand hygiene audit tool	90%
Rate of new cases of Hospital acquired <i>Staphylococcus. aureus</i> bloodstream infection	< 1/10,000 Bed days used
Rate of new cases of Hospital acquired <i>C. difficile</i> infection	< 2/10,000 Bed days used

KPIs on HCAI in 2018 National Service Plan

<i>Health Care Associated Infections (HCAI)</i>	<i>Target</i>
Rate of new cases of Hospital acquired <i>Staphylococcus. aureus</i> bloodstream infection	< 1/10,000 Bed days used
Rate of new cases of Hospital acquired <i>C. difficile</i> infection	< 2/10,000 Bed days used
No. of New cases of CPE	N/A
% of acute hospitals implementing the requirements for screening of patients with CPE guidelines	100%
% of acute hospitals implementing the national policy on restricted anti-microbial agents	100%

In addition the HSE Business Intelligence Unit started collecting data in 2017 relating to the number of newly detected patients with CPE positive results, number of swabs taken for CPE and Meropenem dispensing.

A performance assurance process has been developed for KPI reporting, management and escalation in the acute hospital setting and is outlined below.

Core Hospital IPC/AMS Team:

- Microbiologist (Lead)
- Infection Control Nurse(s)
- Antimicrobial pharmacist
- Surveillance scientist
- Administrative support
- Others as appropriate

Hospital Infection Control Team core Functions/TOR

- Provide guidance and support on surveillance and management of HCAI and antimicrobial stewardship
- Collate data for HCAI KPIs for local evaluation, action and reporting
- Escalate issues in line with *Procedure for Outbreaks/incidents/situations for HCAI*

Core Hospital IPC/AMS Committee

- GM/CEO (Chair)
- Clinical Director
- Director of Nursing
- Consultant Microbiologist(s)
- Infection Control Nurses
- Antimicrobial pharmacist
- Surveillance scientist.
- Specialist in Public Health Medicine
- CHO Rep.
- QPS Lead
- Others (estates, cleaning)

Hospital IPC/AMS Committee Functions/TOR

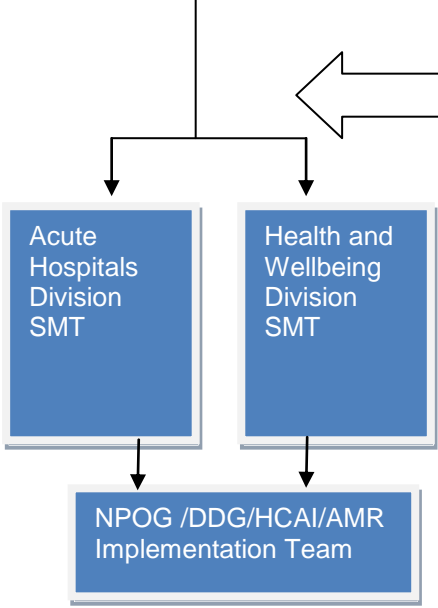

- Review surveillance reports on major HCAI and AMR issues
- Approve annual IPC and Antimicrobial Stewardship plans and reports
- Provide guidance and support to CEO and team on surveillance and management of HCAI and antimicrobial stewardship
- Review and advise on IPC and stewardship gaps
- Escalate issues in line with *Procedure for Outbreaks/incidents/situations for HCAI*

Hospital Group IPC/AMS Committee

- CEO (Chair)
- Group Clinical Director
- Group Director of Nursing
- Chair of each Hospital IPC/AMS Committee
- Consultant Microbiologist(s)
- Infection Control Nurses
- Antimicrobial pharmacist
- Surveillance scientist.
- Specialist in Public Health Medicine/CHO Rep.
- QPS Lead
- Others (estates, cleaning)

Hospital Group IPC/AMS Committee functions/ TOR:

- Review surveillance reports on major HCAI and AMR issues from each hospital
- Approve annual IPC and Antimicrobial Stewardship plans and reports
- Provide guidance and support to CEO and team on surveillance and management of HCAI and antimicrobial stewardship
- Review and advise on IPC and stewardship gaps
- Escalate issues in line with *Procedure for Outbreaks/incidents/situations for HCAI*

HCAI Performance Assurance Group

- National Lead for HCAI/AMR
- BIU
- H &Wb Public Health
- H&Wb Planning and Performance Staff
- AHD Planning and Performance GM
- QPS

HCAI Performance Assurance Group core TOR:

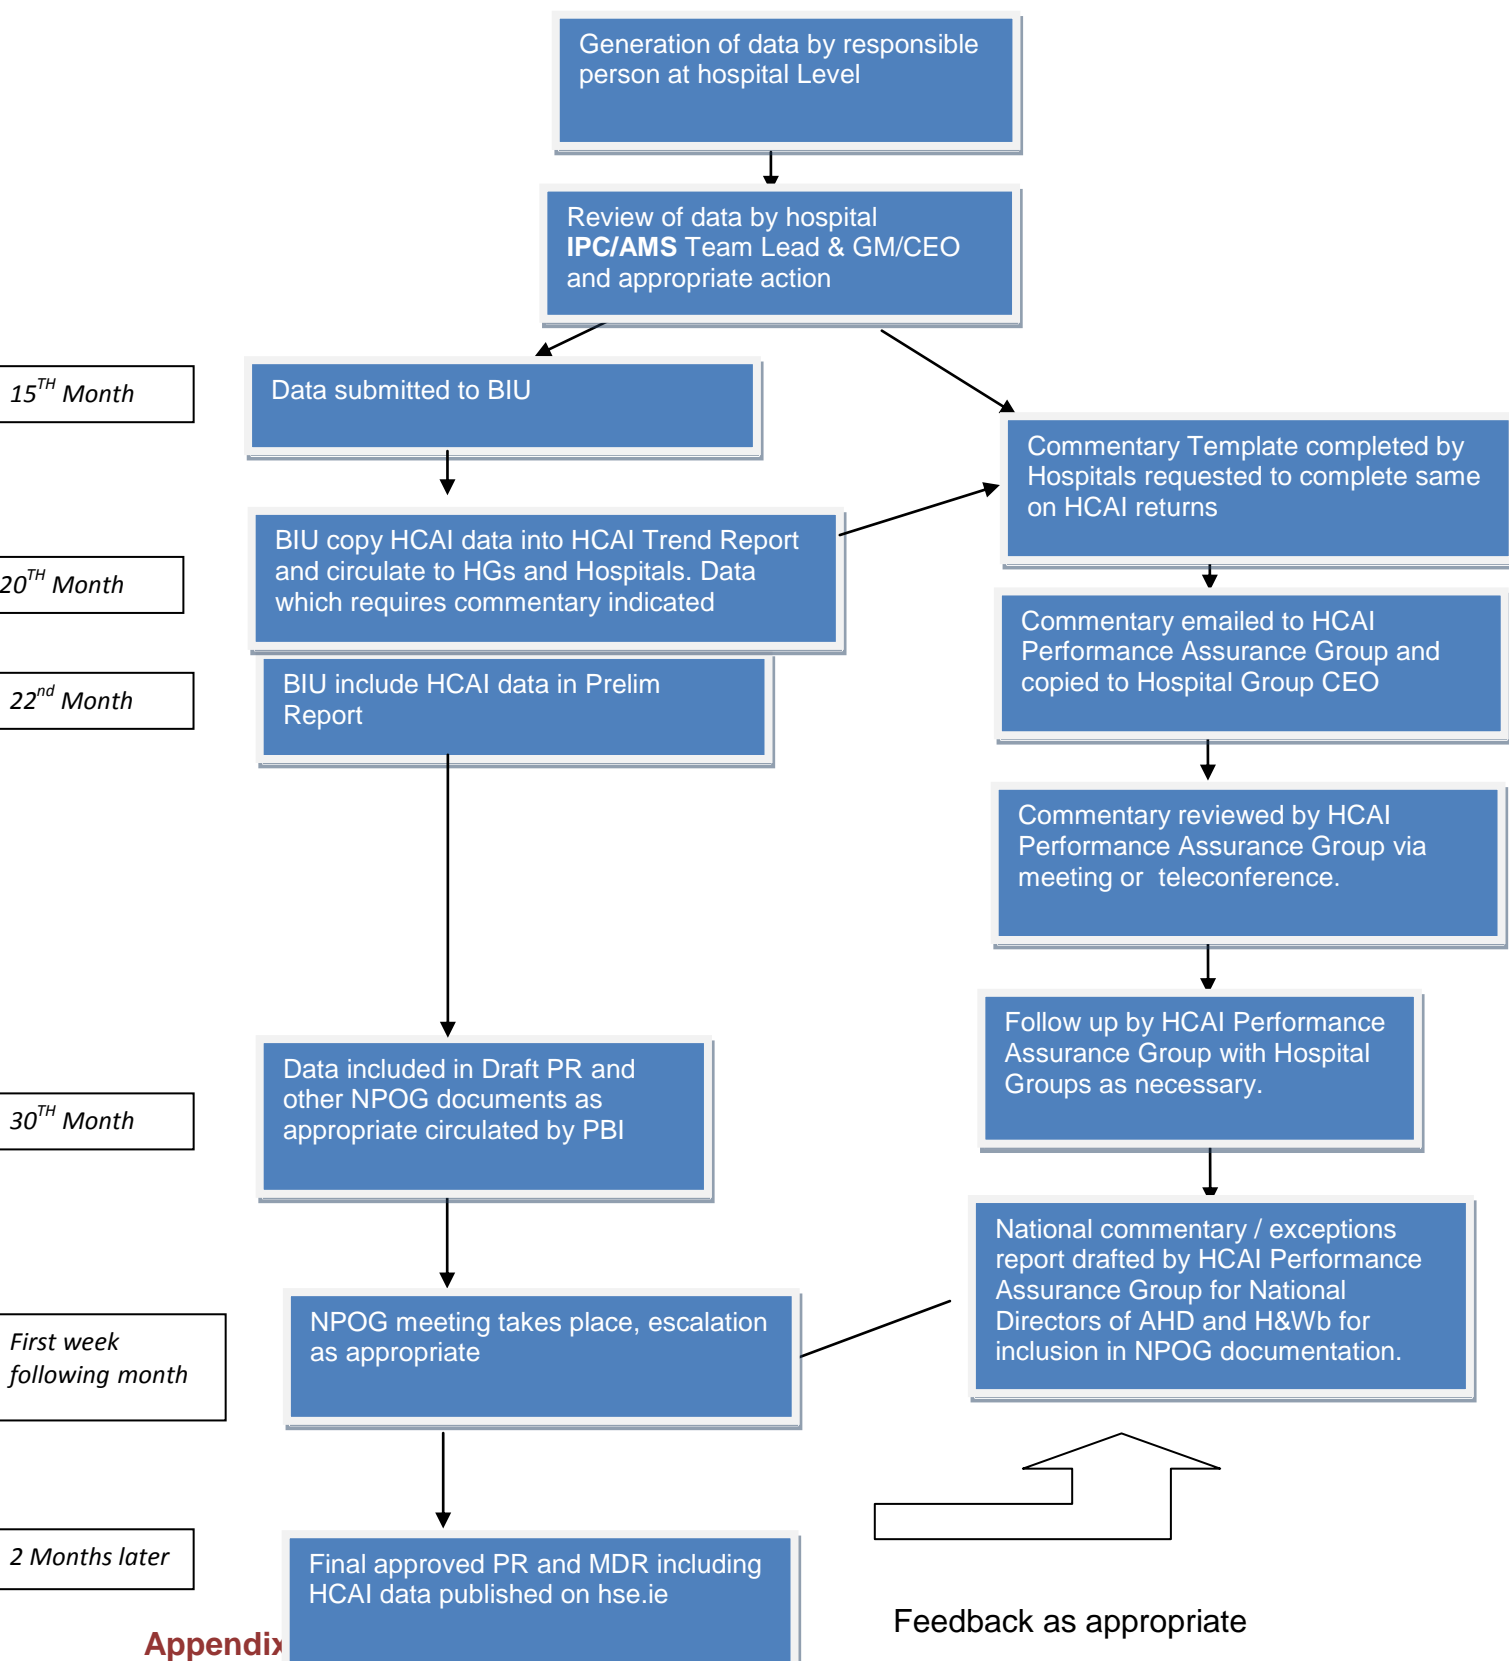

- Review Hospital Group and Hospital data and commentaries & follow up re. same
- Produce National HCAI commentary/ exceptions report for NPOG
- Provide support, and issue guidance

National Directors:

- Co-chair National Steering Group for HCAI/AMS
- Liaise with NPOG and oversee improvement plans as appropriate

Acute Hospital and Health and Wellbeing Divisions 2017 Process for hospital reporting of following HCAI metrics:

- Number and rate of new cases of hospital acquired *Staphylococcus aureus* bloodstream infection
- Number and rate of new cases of hospital acquired new cases of *C. difficile* infection

Appendix

Monthly Hospital HCAI Commentary Template : version 4 20/10/17

Name of Hospital	
------------------	--

Hospital Group		
Month and Year data relates to		
	<i>Staphylococcus aureus</i> bloodstream infection	<i>C. difficile</i> associated diarrhoea (CDAD)
Number of cases and rate of new cases this month		
Has a root cause analysis (RCA) been performed by the primary consultant responsible for the patient with support from the IPC team for each case? (If the answer to the above is no please explain why not)		
Did any of the patients die before discharge or completion of this report? (If the answer is positive: was the case assessed to determine if the death was attributable to infection and what was the outcome of the assessment?)		
Is there evidence of an outbreak (person to person transmission)		
List main factors identified on RCA		
What proportion of cases were related to central venous catheters?		N/A
What proportion of cases were related to peripheral intravenous catheters?		N/A
Have any issues been identified in relation to toilet facilities, commodes, bed pans, bed pan washers	N/A	
Has the primary consultant and the relevant senior nurse reviewed their own hand hygiene practice and that of their team?		
Has the General Manager/CEO and relevant Clinical and Nursing Director(s) convened a meeting to review the factors identified as contributing to this relatively high rate in the RCAs and to plan a response		
List actions planned by the General Manager/CEO and Relevant Clinical and Nursing Director(s)		
Have the incidence(s) of hospital acquired infection above been reported in National Incident Management System		
Name of Person completing commentary		
Name Hospital General Manager/CEO to whom this commentary was copied and approved for forwarding to HCAI Performance Assurance Group.		

Appendix B

Draft Detailed Terms of Reference Hospital Group IPC/AMS Committee

Feidhmeannacht na Seirbhíse Sláinte
Health Service Executive

DRAFT TERMS OF REFERENCE HOSPITAL GROUP INFECTION PREVENTION & CONTROL / ANTIMICROBIAL STEWARDSHIP COMMITTEE

Name of Document:	Terms of Reference
Reference number:	1.1
Date:	14/08/2017
Author:	
Approved by:	✓ Chief Executive
Date approved:	
Date of review:	

Index:

1. Purpose of the committee
2. Composition and operation of the committee
3. Quorum, frequency and operation of meetings

4. **Accountability and reporting**
5. **Suggested agenda items**
6. **Outputs and performance monitoring**

Feidhmeannacht na Seirbhíse Sláinte
Health Service Executive

1. Purpose of the committee

Health care associated infection (HCAI) refers to infection that occurs during the process of health care delivery. A significant proportion of HCAI can be prevented by following certain practices including correct performance of hand hygiene, cleaning, immunisation and early detection and management of infection.

Antimicrobial resistance (AMR)¹ refers to the growing problem of bacteria that are resistant to antibiotics. When such bacteria cause infection they can be difficult to treat because some or many of the antibiotics we rely on may not be effective. The problem of AMR is related to overuse of antibiotics.

HCAI and AMR are connected because health care facilities often use a lot of antibiotics and AMR bacteria can spread from person to person in a health care facility through hands, equipment and surfaces.

The purpose of the committee is to support the Chief Executive in fulfilling her/his responsibility for prevention and control of health care associated infection and antimicrobial resistance in the Hospital Group. This work of the committee should encompass all aspects of healthcare delivery associated with the Hospital Group encompassing both services delivered directly through HSE employees and facilities and those delivered by individuals or agencies contracted to the HSE.

Key function of the committee will include

1. Develop and adopt an annual plan for HCAI & Antimicrobial Stewardship for the Hospital Group addressing at least:
 - a) hand hygiene training
 - b) Training in standard and contact precautions
 - c) Guidelines – review and implementation of relevant national guidelines and identification of unmet guideline needs
 - d) surveillance of *S. aureus* related blood stream infection
 - e) surveillance of *C. difficile* related disease
 - f) surveillance of Carbapenemase producing Enterobacterales (CPE) (colonisation and infection)
 - g) surveillance of meropenem use and use of other critical antimicrobial agents
 - h) Influenza prevention
 - i) HCAI staffing
 - j) Identification of quality improvement initiatives for implementation across the hospital group
2. Review progress on implementation of the annual work plan and develop an annual report to provide assurances that all appropriate measures are being taken to achieve targets set out in Hospital Group Operational Plan and by the National Clinical Lead for HCAI AMR.
3. Review reports on outbreaks and other exceptional events.
4. Advise the Chief Executive Officer on all aspects of infection prevention and control.
5. Evaluate status of HCAI and AMR issues for the risk register and escalate any risks through appropriate governance structure.
6. Review communication with national HCAI AMR team and provide quarterly reports as appropriate.
7. Any other business.

Note: For the purposes of this document the terms antimicrobial and antibiotic can be considered as essentially equivalent.

2. Composition and operation of the committee

The Chair of the committee should be the Chief Executive Officer (CEO). The Co-Chair should be the Chief Operations Officer or Chief Director of Nursing or Chief Clinical Director.

The membership of the committee should whenever include

- Chief Executive Officer (Chair)
- Chief Operations Officer
- Chief Clinical Director
- Chief Director of Nursing
- Quality and Patient Safety (QPS) lead
- Specialist in Public Health Medicine
- General Manager of each acute hospital
- Consultant Microbiologist Infection Prevention and Control Lead for each hospital
- Infection Prevention & Control Nurse for each hospital
- Antimicrobial Pharmacist for each hospital
- Surveillance Scientist for each hospital
- Occupational Health Nominee
- Allied Health Professional Nominee
- Estates nominee
- Patient representative
- Representative from Education / Practice Development
- Representative from Materials Management / Supplies
- Out Patient Antimicrobial Therapy (OPAT) representative
- Consultant Infectious Disease Physician
- Member of National Team (normally the National Lead for HCAI/AMR to attend at least one meeting per year whenever possible)

3. Quorum, frequency and operation of meetings

- The quorum necessary for a meeting to proceed is as follows;
 - ✓ Chair or Co-Chair
 - ✓ A Consultant Microbiologist
 - ✓ An Infection Prevention and Control Nurse
 - ✓ An Antimicrobial Pharmacist.

A second consecutive meeting without the chairperson present is not quorate.

- In the event that a committee member is unable to attend, they are required to send apologies to the Chair prior to that meeting. It is acceptable to send a deputy (deputies nominated at beginning of year may attend), again notifying Chair in advance. The engagement of the Chief Executive Officer (Chair), Chief Operations Officer, Chief Clinical Director and Chief Director of Nursing are critical to the successful operation of the committee and each should attend at least two meetings each year.
- Meetings to be held quarterly. Additional meetings will be called by the Chair if and when required.
- The expected duration for each meeting is approximately one and half hours.

4. Accountability and reporting

The function of the committee is to review reports and to make recommendations. The Chief Executive Officer and Executive Management Team (or equivalent) is responsible for implementation of recommendations and will report on progress to the committee.

5. Suggested agenda items

- Apologies
- Approval of the minutes from the previous meeting
- Matters arising
- Updates from each Head of Service

- Review and approve annual HCAI and AMR plan which will be aligned with *Standards for Safer better Healthcare*
- Review and approve annual report on HCAI and AMR
- Updates from Subgroups
- Key Performance Indicators / Outbreaks / Incidents / Complaints
- Surveillance, audit findings and recommendations
- Implementation of HCAI Standards update
 - Any other business

6. Outputs and performance monitoring

- Minutes of the committee meetings will be formally recorded and circulated to all committee members within two weeks of the meeting being held.
- Approved minutes of the meetings will be freely available to all Hospital Group staff and members of the public.

Appendix C

Sample Root cause Analysis Forms for *Staphylococcus aureus* blood stream infection and *C. difficile* infection

Staphylococcus aureus blood stream infection (BSI) Root cause analysis template:

Medical/Surgical team to complete:
